Education

Technical University of Munich Oct 2026 – (2028)
Master of Science in Robotics, Cognition, Intelligence *Munich*
- **Focus:** Software Development, Agentic AI, Data Engineering, ML

Technical University of Munich Oct 2022 – Oct 2026
Bachelor of Science in Informatics *Munich*

Experience

ITM Pharma Solutions GmbH Apr 2024 – Nov 2025
Working Student: BI Engineer | MS Fabric, Python, Pandas, PySpark, OpenAI API, Excel *Garching bei München*

Developed custom data solutions for R&D and Sales departments at a radiopharmaceuticals company specializing in cancer diagnosis and treatment. Built and automated ETL pipelines from multiple sources. Implemented and maintained complex data reporting systems that enabled data-driven decision making across departments.

- Automated ingestion, cleaning, and relational modeling of dpt-managed Excel files and external API data (clinicaltrials.gov) in MS Fabric, leveraging Python, Pandas, and PySpark to deliver scalable, analytics-ready datasets for regular reporting, reducing manual data processing time by 70%.
- Integrated OpenAI API to extract and standardize complex or ambiguous information; implemented error-handling routines that route problematic cases to a review report for manual inspection.

MyCleanHotel Oct 2024 – Mar 2025
Praktikum @ TUM | C# ASP.NET, Svelte, Docker, Postgres, RabbitMQ *Garching bei München*

Developed a microservices-based management system for Garching's Galileo Hotel to track staff time, room assignments, and facility usage with real-time analytics dashboards.

- As part of a 4-person team, developed a Time Tracking microservice (C#, Entity Framework), implementing CRUD APIs with full test coverage (unit/component/integration), resulting in robust and reliable tracking of work time spans.
- Engineered backend data-fetching and aggregation methods for the Analytics microservice, enabling real-time KPI dashboards using Cube.js and pre-aggregated reporting.
- Designed and implemented interactive Svelte frontend dashboards with ApexCharts.js, connecting to microservice APIs and delivering dynamic data visualizations while supporting mock/demo data for development and testing.

Selected Projects

Bachelor's Thesis: Bridging Spatial Context and LLMs in AR May 2026 – Sep 2026
Unity, ARCore, YOLO11, OpenAI Realtime API, Kotlin
- **Computer vision:** Built an Android AR memory assistant with on-device YOLO11 detection mapped onto the ARCore point cloud, including occlusion and depth gates and stable object IDs across camera movement.
- **Agentic AI:** Built an LLM voice agent with a 3D avatar and spatial tool calls; **Study design & analytics:** designed and ran a 60-participant study with a custom Kotlin recall-recording app.

Lumann Soundsystem | *Python, FastAPI, React, Qwen3-TTS, FFmpeg* Jul 2026 – now
- Built a local-first audiobook generator around Qwen3-TTS, with non-destructive re-recording, live progress, and export to M4A/WAV.

ivy llm | *TypeScript, VS Code API, React, Vite* Feb 2026 – now
- Built a VS Code extension that keeps the familiar AI chat workflow while adding branches and per-message context control. Designed for effective learning, codebase exploration, and work planning.

Skills

Languages: English (C1), German (C1), Russian (Native)
Programming Languages: Python, C#, Java, Kotlin, C, SQL, HTML/CSS/JS, PHP, x86 Asm, OCaml
AI & Computer Vision: YOLO11, ONNX Runtime, ARCore, OpenAI Realtime API, LangChain, Ollama, PyTorch
Development Frameworks: Unity, ASP.NET, Jetpack Compose, FastAPI, Svelte, Pandas, PySpark
Developer Tools: MS Fabric/PowerBI/Excel, Git, Docker, Postgres, ChromaDB, Figma, Adobe PS/Illustrator
